

EKITI STATE

DIGEST OF AGRICULTURAL STATISTICS, 2023

Produced by:
State Bureau of Statistics, Ekiti State

FOREWORD

The Digest of Agricultural Statistics of 2023 was based majorly on administrative data gathered from key institutions that make up the agricultural sector in the State. As part of regular statistical activities of the State Bureau of Statistics, Digest of Agricultural Statistics is aimed at providing statistical information on agricultural activities and products such as crops, forestry, livestock, and fishery.

The publication is partitioned into Ten (10) chapters which include farmers and farmland, crops cultivated, agricultural produce, live stocks and poultry, veterinary services, fishery, agricultural inputs, forestry, prices of agricultural commodities and climatology. Also covered in the document are information on sawmills ownership classified on gender basis, solid mineral resources and their locations as well as natural resources, vegetation and locations.

The publication is made possible through the collaborative efforts of relevant MDAs like Ministry of Agriculture and Food Security, Ministry of Environment and Natural Resources, Agricultural Development Programme (ADP), Forestry Commission etc. Our sincere appreciation goes to the officials of various MDAs that supplied the required data as well as staff of the Bureau of Statistics that gave supportive hands in the process of data compilation and analysis.

I am confident that this publication will be of great assistance to stakeholders in the agricultural sector, researchers, government institutions, private individual's, corporate organizations and Development Partners.

I want to reiterate here that, useful suggestions and criticism will be welcomed from different users of this document for improvement of future editions.

1. CHAPTER ONE: Farmer and Farmland	5-16
2. CHAPTER TWO: Crops Cultivated	17-20
3. CHAPTER THREE: Produce	21-26
4. CHAPTER FOUR: Livestock and Poultry	27-29
5. CHAPTER FIVE: Veterinary Services	30-34
6. CHAPTER SIX: Fishery	35-40
7. CHAPTER SEVEN: Agricultural Inputs	41-47
8. CHAPTER EIGHT: Forestry	48-59
9. CHAPTER NINE: Prices and Agricultural Production	60-64
10. CHAPTER TEN: Climatology	65-68

INTRODUCTION

Agriculture has remained the mainstay of the economy of Ekiti State employing over 85% of the working population in the State. Over 70% of the uninhabited land of the State is used for agricultural activities.

All the various kinds of Agricultural activities are being practiced in the State with cash and food crops production most prominent. Others such as poultry / livestock, fishery and lumbering are trailing far behind.

In line with the essence of this publication which is to give basic and useful Statistical information concerning agricultural sector of the State economy for planning and policy formulation for developmental purpose in the sector, the publication is classified into different sections for easy references on the various aspects of agricultural activities covered.

Observations and explanations are given on each chapter for easy interpretation of the tables. The publication is aimed at making available to the general public, some basic analysis about Agriculture in Ekiti State. The data contained in the publication were either extracted from the available data of State Bureau of Statistics, records of Ministry of Agriculture and Food Security, Ministry of Environment, Forestry Commission and Ekiti State Agricultural Development Project among others.

It is hoped that the publication will be of immense assistance to users in the public and private sectors within and outside Ekiti State.

CHAPTER ONE
FARMERS & FARMLAND

FARMERS AND FARMLANDS

There are six tables in this section which includes:

Table 1.1: estimated number of farmers, farmers that registered with government and are receiving government assistance during the reference period. Others include major agricultural products, land allocated and solid minerals resources available in the state among others.

It could be observed from table 1.1 that there were a total of 2,126,031 estimated farmers in the state out of which 1,488,216 were registered. The highest figure of the estimated farmers of 278,005 (13.8%) came from Ado Local government area however, 13.8% of them registered. Other local governments like Ijero, Ekiti West, and Ikole each had 9.25%, 7.49% and 7.10% of the total registered farmers respectively. Ilejemeje local government had the least number of registered farmers with 26,981(1.81 %) of the total registered farmers in the state.

Table 1.2: summary of agricultural empowerment scheme, number of farmers redeemed and input provided in 2023. Out of the total number of 11,139 farmers redeemed, maize seeds were given to 3,041 farmers, rice seed of 3,924 were given in addition to 300 tubers of yam, 2,556 cassava cuttings and 1,318 of fertilizer within the year under reference.

The major agricultural related occupation in the State are: fisheries services and animal husbandry for both subsistence and commercial purposes. See **Table 1.3.**

Table 1.4 shows the major agricultural products found in Ekiti State, in 2023 and the respective local government areas where they are largely found. These include cocoa, oil palm, plantain, yam, cassava, maize, rice etc.

Table 1.5 also shows the total available farm land of 20,509.65 hectares for allocation. Total area allocated and area-in-use are 337 hectares and 2,430.5

hectares respectively while the total number of uncroppable land is =====
hectares.

The records of solid mineral resources by local governments in 2023 were shown in **Table 1.6**. Major minerals include Laterite, Sand, Granite, Charmokite, Cassiterite, Columbite, Tantalite, Quartz, Kaolin, Onyx and Gemstone among others.

The resources found across sixteen (16) local government areas in the state are used majorly for industrial engineering and building construction materials, such as ceramics, additives, rubber, cosmetics and so on.

CHAPTER THREE
PRODUCE

PRODUCE

This chapter presents the summary of graded cocoa seedlings raised and distributed, the tonnage of graded cocoa, palm kernel produced in metric tons, purchase of selected cash crops and quantity of cash crops graded by local government areas, 2023.

Table 3.1 contains the statistical information of tonnage of graded cocoa and palm kernel. It was observed that the total ton of cocoa graded is 3,527 while total ton of palm kernel graded is 6,274.5. Gbonyin has the highest record of graded cocoa of 1,145 (32.46%) tons and palm kernel of 2,496(39.65%) tons. Ido/osi has the lowest record of cocoa graded of 8 (0.23%) tons in the year.

Table 3.2 The cocoa and palm/kernel in metric tons by months show that 3,527 and 6,294.5 tons were sold respectively. From the table, it is noted that purchase of cocoa slipped down within April to June 2023 and then picked up again from July. Cocoa was mostly purchased with a record of 936 in November, 2023.

Table 3.3 shows the quantity of cash crops graded by local government areas. It is observed that Gbonyin records the highest quantity of graded cocoa 1,145,000(KG) and palm kernel 2,496,000(KG) while Ado Ekiti has the highest quantity of graded cashew nuts 52,000KG).

Table 3.4 shows the statistics of crops (Tree crop) produced in Tons. Cocoa has a record of 4,425 tons in 2022 which reduced to 3,527 in 2023; Palm Kernel reduced from 6,660.5 tons in 2022 to 6,294.5 in 2023, also the tons of cashew reduced from 209 to 114.5 between 2022 and 2023.

CHAPTER FOUR
LIVESTOCK & POULTRY

LIVESTOCK & POULTRY

Information contained in **Table 4.1** reveals that the number of slaughtered cattle in Ado-Ekiti was (13,987) (10.79%) then Iyin-Ekiti has 8,760 slaughtered cattle while Ilawe-Ekiti was the least with (6,400) (4.9%). The total slaughtered cattle was 129,583 in the State.

It was also observed that slaughtered goat for the year was (71,095).

CHAPTER FIVE
VETERINARY CLINICAL SERVICES

VETERINARY SERVICES

Table 5.1 indicates the distribution of new cattle disease, fowl pox, ibon DV and total vaccination dispensed in all local government areas.

It was shown that the total new cattle disease (121,920), fowl pox (43,570) and ibon DV (29,560) recorded in 2023 is summed up as 194,990. Ado Local Government records the highest infection while Ilejemeje Local Government records the lowest in all the infections.

Table 5.2 reveals that 161 surgical operations, 48,734 vaccination and 64,218 veterinary clinical services were carried out in 2023. February has the highest number of surgical operations with 22 (13.6%), while November has the lowest number of operations with 5 (3.1%) in the year.

Table 5.3 indicates that 783 veterinary diagnosis occurred, out of which the month of May, August and October recorded the highest percentage distribution of 10.2%. 19,581 Veterinary public health and abattoir services occurred and June recorded the highest percentage of 11.2%.

CHAPTER SIX

FISHERY

FISHERY

The section contains five (5) tables which show statistical information on all activities carried out in the fishery sector including aquaculture and artisanal fish production, aquaculture growth enhancement scheme, registered fish ponds and estimate of artisanal fish production.

Table 6.1 presents the quantity of selected types of fish (*Clarias Gariepinus* and tilapia) harvested in aquaculture and artisanal fish ponds. It was observed that Clarias Gariepinus were mostly harvested in all the ponds.

The quantity of Clarias Gariepinus was 78,348 from aquaculture and 25,501 from artisanal totaling 103,849 while Tilapia harvested was 5,428 from aquaculture and 6,245 from artisanal production totaling 11,673. The quantity of fishes harvested from aquaculture and artisanal was 83,776 and 31,746 respectively. See **Table 6.1** for details

Table 6.2 shows the number of fish ponds and harvest in tons recorded across all local government areas in Ekiti State. The total number of fish ponds and harvests in tons was 12,866 and 6,021 respectively. Ado-Ekiti had the highest number of fish ponds (4,320) and harvest (2,467) followed by Efon 1,850 and 620 respectively.

Table 6.3 explained the statistics of big time fish farmers / fish pond in Ekiti State located in Ado, Ikere and Iyin. There were 307 fish farms owned by Afe Babalola being the highest and the least of 9 owned by Sadadok

Table 6.4 presents estimated artisanal fish harvests from rivers and reservoirs in Ekiti State. Out of the rivers in Ekiti, Ado, Gbonyin, Ikole, Moba and Oye local government areas, it is observed that Egbe Dam in Gbonyin ranked the highest with 268 metric tons of fish harvested.

CHAPTER SEVEN AGRICULTURAL INPUTS

Before pesticide application After pesticide application

AGRICULTURAL INPUTS

The section contains information on inputs such as herbicides, insecticides, pesticides as well as fertilizer among others.

Table 7.1 contains records on agro chemical sales by local government which shows that 37,369 litres of Herbicides and 15,323 liters of Insecticides, 244Kg of storage chemical were sold during the reference period.

The number of fertilizer distributed by price and the total amount of money spent on fertilizer in year 2023 was N89, 500. See **table 7.2**

Table 7.3 contains different types of chemical used for fruits/citrus which are herbicides insecticides, fungicides and pesticides as well as seedling and fertilizer distributed/sold. Others are hardware used in farming, types of chemical applied to fruits such as citrus, pineapple, banana, water melon and garden egg among others

CHAPTER EIGHT
FORESTRY

FORESTRY

Information on forestry in the State for the year 2023 is presented in this chapter.

Table 8.1 and 8.2 give analysis on the number of sawmills, sawmill ownership, out-turn of timber felled across local government areas and month of the year.

There were 160 sawmills with Ise/orun local government having the largest figure of 29, followed by Gbonyin with 18 and Ayekire 16, Ijero, Ilejemeje and Efon has the least with 1 (one) each.

The total number of trees felled in all the sawmills were 5,554. Ise/orun, Emure and Irepodun/Ifelodun were 1st, 2nd and 3rd with 870, 639 and 403 respectively. The number of trees felled in December and June 2023 were the highest in the range of 1,371 and 1,280. For further details, see **table 8.3**.

Table 8.4 shows information about forest reserves including their location, types and their level of exploitation. There are ten (10) forest reserves which covered a total area of 297.1km and spread across Nine (9) Local government areas in the State. All the forest reserves were high forest and savannah in nature. See **table 8.5** for more details.

The type and area of forest reserves were revealed in **table 8.6** which shows the lowland/rainforest with 198.16 hectares and savannah with 99.93 hectares.

Table 8.7 shows the distribution of wood by types and area covered across each Local government in the State.

Table 8.8 shows forest indices (input, processing, facilities and products) are highlighted. The indices include the total revenue on trees felled, number of trees felled and volume of timber extracted which was N71, 703,220, 5,554, 14,115.22 and 297km².

Table 8.9 reveals revenue generated from forestry and timber processing in the State for the year 2023. The total amount generated was ₦52,332,560.05

Table 8.10 reveals the towns and locations of forest reserves area in Km. Among the towns are: Emure (73.24Km²), Ado (72.52Km²) and Aramoko (19.56 Km²) etc.
